

The Lockheed SR 71 is the fastest reconnaissance - aircraft of the world. It can fly at up to Mach 3 (3600 KMH) and at altitudes that none aircraft can intercept it. The first aircraft was built in the '60s, and the aircraft risks to be retired, 'cos pilots say that during in-flight refueling the SR 71 flies in permanent stall and it's hard to maintain control. It's in any way a great challenge for every pilot.

NOTE: OLD file provided AS-IS. We keep these as a historic memory but have very few support for these old files...
