

Alenia Lockheed C-27J Spartan

Sunday, 17 May 2009 09:33 - Last Updated Tuesday, 10 November 2015 13:59

Fast, strong, and with exquisite control harmony. The C-27 is a renewed version of the Alenia G-222. Main changes are in engines and avionics. The aircraft has lots of parts in common with the C-130 Hercules, so the two aircraft are easily inter operable. This is a derivative of my G-222 Model, has the same features with new engine housing and propellers, 616 Kb model file with 16188 polygons and 119 assemblies (I removed one that was a black cover of an air intake of the old G-222 Engines...). This is a former FS-2002 aircraft. It should work OK with FS-2004.
